1. Introduction

- Give a brief introduction to your project and the list of features. Summarize in a few sentences what you proposed in the ideation report.

It will be a personal one page (SPA) prototyped based application that offers various services, current projects, and so on using react-router to provide single-page navigation among multiple views so UX will be like a native application.

2. User Interface Design and Prototype

- Here is my layout of expectations placed at left side.

3. Navigation Structure

- Will be multiple components represents various views on services, offerings, our past projects, testimonials, contact, about, career sections.

4. References

- I could have re-design my single page web page using react.
